## Build your Dream Pond just the way you want it!

If you prefer to design your pond a little larger and to add your own personal touch then you'll need the Garden Flexible Pond Liner. This is available in Black PVC Vinyl. You should protect your pond liner against stones and roots by installing a layer of rot-resistant Aqua-Tech® Pond Panel Pad underneath. Pond liners are available in .52 and .72 thicknesses.

**Step 1**  
Mark the outline of your pond with a hose or some string and dig out the individual pond zones outside to inside.

**Step 2**  
Dig a trench approx. 15cm deep around the pond as a capillary barrier and remove stones and roots.

**Step 3**  
Fill the hole for the pond with a layer of sand approx. 5cm thick and press down well.

**Step 4**  
Measure the amount of pond liner required and line pond with pond Panel Padding.

**Step 5**  
Fit pond liner.

**Step 6**  
Fill with water, plant the plants of your choice and your pond is complete - enjoy.
